SUMMARY

Final-year AI student at Multimedia University focused on engineering automated data pipelines and applying ML/DL to real-world datasets. Shipped a live, self-updating NLP pipeline with weekly CI/CD automation and public deployment, and an end-to-end ETL system processing 1,470 records with zero manual intervention. Experienced in optimized SQL (CTEs, window functions) and production-style ML workflows. Seeking an AI or ML engineering internship.

EDUCATION

Multimedia University, Melaka, Malaysia

Mar 2024 – Mar 2027

Bachelor of Computer Science (Artificial Intelligence) | GPA: 3.4 | Dean's List

Relevant Coursework: Machine Learning, Deep Learning, AI Fundamentals, Data Analytics, Database Systems, Data Structures & Algorithms, Computer Programming (C++), Software Engineering

TECHNICAL SKILLS

Languages & ML/AI: Python, SQL, C++, Machine Learning, Deep Learning, LSTM, XGBoost, Random Forest, Feature Engineering, Model Evaluation, NLP / Transformers

Data Engineering & Tools: ETL Pipeline Design, SQLite, Pandas, NumPy, TensorFlow/Keras, Scikit-learn, HuggingFace Transformers, Streamlit, GitHub Actions, Matplotlib, Power BI, Google Analytics

PROJECTS

AI-Powered Autonomous Supply Chain Optimization & Risk Management System (SCOMS) In Progress, Expected Mar 2027

Final Year Project, B.CS (AI), MMU | Python, TensorFlow/Keras, Scikit-learn, XGBoost, Streamlit

- Designed a three-module AI pipeline — LSTM demand forecasting, Random Forest supplier risk classification, and EOQ/ROP inventory optimization — for retail supply chain decision support, benchmarked against XGBoost and 11 peer-reviewed papers
- Built a Random Forest supplier risk classifier and an inventory module computing EOQ, Reorder Point, and Safety Stock from forecast output, surfaced via a Streamlit dashboard

YouTube AI Sentiment Tracker — Live NLP Pipeline & Dashboard

Jul 2026

Python, YouTube Data API v3, SQLite, HuggingFace Transformers, Streamlit, GitHub Actions

- Engineered an end-to-end NLP pipeline collecting 650+ YouTube comments via the YouTube Data API v3, with SQLite deduplication and RoBERTa-based sentiment scoring for robustness to informal internet language
- Automated the full pipeline weekly via GitHub Actions and deployed an interactive Streamlit/Plotly dashboard publicly, surfacing a validated finding that sentiment skews negative (~3:1) across ChatGPT, Gemini, and Copilot

XGBoost Diabetes Risk Models — Clinical & Behavioral Datasets

December 2025

Python, XGBoost, SMOTE, GridSearchCV, Scikit-learn

- Built two parallel binary classification pipelines predicting diabetes onset from a 2,000-patient clinical dataset and a 50/50 balanced behavioral/socioeconomic dataset, with engineered interaction features and median imputation
- Resolved class imbalance via SMOTE and tuned via 5-fold GridSearchCV across 432 combinations, reaching 82% test accuracy on the minority class and 79.4% accuracy with balanced precision/recall on the behavioral pipeline

CERTIFICATIONS & ADDITIONAL INFORMATION

HCIA-AI V4.0 — Huawei | CCNA: Introduction to Networks | Claude Code 101 — Anthropic | Microsoft Power BI for Beginners | Google Analytics Certification

Languages: Arabic (Native), English (Professional working proficiency)
